

Surlyn® Resins

Description

Surlyn® resins are for use in cast film and extrusion coating operations. It can be used in both extrusion and coextrusion coating equipment designed to process polyethylene resins.

Typical Applications

Medical/pharmaceutical packaging

Powdered/granular food and nonfood pouches

Snack structures

Features/Benefits

A most outstanding material which have the strongest sealing ability in packaging industry

The remarkable heat glues in intensity and the widest temperature range

The broadest heat sealing temperature range, the outstanding performance of crossing the pollutant to sealing

Scribble and distribute on the paper and aluminum foil directly, there is excellent gluing the shutting

Bear the oil, bear the fat and bear the melting agent, anti-chemistry material

Enhance the external appearance attraction of the packing by clear limpidity function

Excellent molding function and pull function

Excellent wearable function and unpierceable function
