

Suva® 123(R-123) Replaces R-11

Suva®123 is an HCFC replacement refrigerant for R-11 in low-pressure centrifugal chillers. New centrifugal equipment designed for Suva®123 can provide exceptionally high energy efficiency. In retrofits of existing centrifugal chillers, especially if the chiller is more than 8 years old, equipment modifications are often needed to increase capacity or avoid material incompatibility (especially elastomers). It is always recommended that the Original Equipment Manufacturer be consulted on any retrofit situation.

Benefits :

OEM acceptance

Endorsed by many major chiller manufacturers.

Low overall operating cost

It is in new equipment.

Proven R-11 replacement

In chiller systems worldwide.

Excellent environmental properties

Very low ozone depletion.

Safe and easy to use

B1 ASHRAE safety classification, EPA SNAP accepted. UL recognized.
